PROFILE

Computer Engineering student who builds with **web technologies and agentic AI**. Shipped an AI-powered marketing agent, completed a Product Experience internship, and enjoy turning ideas into clean, usable products. Seeking a **web development / AI-focused internship** to grow through real-world projects and contribute with creativity and analytical thinking.

EXPERIENCE

Product Experience Intern
May 2026 – June 2026

Kelicalix Technology

- Conducted functional and beta testing of web and mobile apps to uncover bugs, usability issues and performance gaps.
- Prepared detailed testing reports, documented issues and re-tested fixes to verify application behaviour.
- Contributed UI/UX design ideas for the **Home, Journal and Communities** pages.
- Supported the marketing team with X (Twitter) content scripting, trend research and weekly content strategy planning.

Student Software Developer

Symbiosis Institute of Technology, Nagpur

- Took part in code reviews to uphold code quality and coding best practices within the team.
- Debugged and resolved a wide range of software issues, building strong root-cause problem-solving skills.
- Gave technical support to end users and resolved reported issues promptly.
- Mentored junior developers by sharing best coding practices.

PROJECTS

Agentic AI Marketing Message Generator | Python · Gradio · Groq · Render

Built an agentic AI app that creates personalized marketing messages through a **three-agent workflow**: audience analysis, marketing strategy development and message generation. Powered by Groq's Qwen 27B model and deployed on Render.

Train Buddy | Skill-exchange platform

Built and completed a platform where users share and learn skills via live sessions, chat and collaborative learning.

AI Real-Time Visual Tracking System | CCTV surveillance · Facial recognition

Developed a system that detects and identifies registered and unregistered individuals in live CCTV feeds using facial recognition.

CyberRakshak | AI-powered mobile security app (concept)

Conceptualized an app that protects users from digital scams such as fraudulent calls, fake QR codes and malicious applications.

EDUCATION

B.Tech – Computer Science Engineering
Expected Jan 2028

Symbiosis Institute of Technology, Nagpur

SGPA: Sem 1 – 7.46 | Sem 2 – 7.50 | Sem 3 – 8.08

Higher Secondary (HSC)
March 2024

Major Hemant Jakate Junior College, Nagpur

Score: 81.83%

Secondary (SSC)
June 2022

Tejswini Vidya Mandir, Nagpur

Score: 94.60%

SKILLS

PROGRAMMING

C | C++ | Python | Java (Basics)

WEB

HTML | CSS | JavaScript

AI & PROMPTING

Prompt Engineering | Agentic AI | LLM APIs | Gradio

TOOLS

VS Code | GitHub | Antigravity | Render

CORE SUBJECTS

Data Structures | DBMS (MySQL) | Operating Systems

INTERESTS

Cybersecurity | UI Design

STRENGTHS

- **Prompt engineering** – I write clear, well-structured prompts that get precise results from ChatGPT and Claude for assignments, research and everyday tasks.
- **Logical & analytical** thinker with a problem-solving mindset.
- **Quick learner** with consistent academic improvement.
- **Communication** – keen on group discussions and interviews, actively building fluency and confidence.
